

Fracture Advantage

A complete solution for fracture care

- Safely get patients to surgery faster.
- Improve outcomes for fracture care patients.
- Enhance the reputation of your orthopedic program.

Fracture Advantage is a comprehensive fracture care solution for your hospital. Leveraging our experience working with over 250 healthcare organizations, Accelero provides the expert resources, proven processes and innovative management tools necessary to build a high performing program.

FRACTURE ADVANTAGE MODULES

The Fracture Advantage solution is provided in a modular fashion to allow customers the flexibility to select the right components, at the right time, and for the right price. In combination, our solution delivers efficiencies and best practices across the entire episode of care to improve your program's value based performance and overall marketability. Each module is delivered by Accelero experts who collaborate onsite with your team to implement solutions and achieve a quicker time to benefit.

CARE MODULES

Patient Admission and Optimization

This module improves the care transitions from admission to discharge and optimizes patients for a safe and predictable outcome. The benefits include:

- Decreases time from admission to surgery
- Improves patient safety
- Creates hospitalist, ED physician, surgeon and anesthesia collaboration
- Reduces process variability

Patient and Family Education

This module aligns care expectations and establishes communication between patients/family and providers. The benefits include:

- Defines acute and postoperative care expectations
- Reduces family and caregiver anxiety and concerns
- Improves patient experience and satisfaction scores

Order Sets and Plans of Care

This module utilizes best practices to reduce variability in postoperative care across providers, and prepares patients for a predictable care experience, discharge, and outcome. The benefits include:

- Establishes best practice order sets
- Improves pain management protocols
- Accelerates rehabilitation care
- Improves length of stay management
- Decreases postoperative complications and readmissions

Length of Stay Management and Discharge Effectiveness

This module seeks to improve the care coordination and safely discharge patients to the appropriate post-discharge care destination. The benefits include:

- Decreases cost of care
- Improves time to discharge
- Reduces unnecessary readmissions

Clinical Outcomes Improvement

This module utilizes data and root cause analysis to identify process and programmatic implementation initiatives that will boost clinical outcomes performance.

The benefits include:

- Decreases inpatient hospital complication rate
- Improves length of stay management
- Improves patient satisfaction scores
- Decreases cost of care

Fracture Coordinator Development

This module provides the fracture care coordinator with training and tools needed to effectively execute their roles and responsibilities and meet performance goals.

The benefits include:

- Defines specific roles and responsibilities
- Establishes goals and objectives
- Provides tools and templates

PERIOPERATIVE MODULES

Case Scheduling and Equipment

This module implements policies and procedures that decrease variability and increase dependability in scheduling surgical cases and fulfilling case cart requirements. The benefits include:

- Decreases time between cases
- Increases preference card accuracy
- Increases case cart accuracy
- Improves intraoperative time
- Improves staff satisfaction
- Increases block utilization

Patient Flow and Throughput

This module optimizes the perioperative environment to improve procedures and create capacity for additional cases. The benefits include:

- Defines patient flow from preoperative through PACU
- Establishes common goals and actions across perioperative team members
- Improves perioperative team proficiency
- Improves turnover time between cases
- Increases capacity for additional surgical cases
- Increases room utilization

Metrics and Infrastructure

This module establishes a culture of accountability and teamwork to enable continuous process improvement.

- Establishes team infrastructure
- Defines performance metrics and reporting
- Aligns goals across all key stakeholders

GROWTH MODULES

Disease-Specific Care Certification

This module provides a proven methodology and process for achieving Joint Commission Disease-Specific Care (DSC) Certification for Hip Fracture. The benefits include:

- Establishes the Joint Commission DSC project timeline
- Defines core performance metrics
- Defines clinical practice guidelines
- Accelerates the application process
- Prepares objectives and documentation for Joint Commission site visit
- Develops site visit presentations
- Achieves Joint Commission DSC Certification for Hip Fracture

Program Outreach and Marketing

This module defines the patient outreach and marketing initiatives to build the market awareness and volume growth of the hip fracture program. The benefits include:

- Defines the current market share and growth opportunity
- Differentiates the program brand and brand messaging
- Develops the patient outreach and marketing activities for volume growth
- Provides the templates and tools to accelerate time to market
