

# Perioperative Advantage

## A **complete solution** for improving orthopedic perioperative efficiency

- Improve OR and surgeon utilization.
- Add more cases to your surgical day.
- Create a culture of continuous improvement.

---

To keep pace with the expected growth in orthopedic procedures over the next decade will require a new level of efficiency and care. Processes must facilitate high patient throughput while ensuring exceptional patient care and satisfaction. Surgeons, anesthesia, operating room staff and hospital administration must work in unison to achieve their goals.

The Accelero Perioperative Advantage helps hospitals and surgery centers to reduce costs, add consistency and reduce the overall time required for orthopedic procedures. The result, in many cases, is the surgical team can perform more surgeries in the same or less time. Hospitals benefit through improved contribution margins, higher throughput, less overtime and improved staff morale. Surgeons enjoy the benefit of more procedures and a more efficient use of their time. Most importantly, patients appreciate a more predictable process that gets them home sooner.

Accelero will help you to create a culture of continuous improvement with a highly efficient perioperative process that is both repeatable and measurable.

## EFFICIENT AND REPEATABLE

Our team of Lean Six Sigma Black Belts will remove wasted movements and materials to ensure your perioperative process is efficient and repeatable. This results in shorter, more predictable procedures that can be accurately scheduled and allow for additional cases.

## IMPROVED OUTCOMES

Each project team includes a clinical expert who ensures your perioperative processes are designed to provide superior operational outcomes with fewer readmissions. They help you to create a plan to reduce complications and minimize pain management issues. Doing so reduces your overall cost of care and improves the patient satisfaction scores, leading to a higher performing perioperative program.

## PROPRIETARY TOOLS

Accelero uses proprietary Success Factor Scoring methodology to analyze the maturity of your perioperative process. We use *OrthoVal*<sup>®</sup>, our proprietary hospital intelligence tool, to easily view, set goals and benchmark your perioperative metrics against best-in-class facilities. We also analyze and address the variability between surgeons for a more consistent perioperative suite.

## CONTINUOUS IMPROVEMENT

Reimbursement programs are designed to reward high performing programs. As hospitals improve, their metrics improve and the baseline rises. Last year's leaders quickly become average. That is why we not only implement leading programs, but we provide the necessary infrastructure for continuous improvement so your program will continue to be a leader, year after year.

## EXPERTISE

Led by a Lean Six Sigma Master Black Belt, our team of Lean Six Sigma and clinical experts has significant experience working with and for hospital systems to identify and operationalize process inefficiencies. Our team will reduce your implementation time by an average of 18 months and provide you with the capacity necessary for volume growth in your OR.

## CREATING CHANGE

Before you can improve your surgical efficiency, you must first know where the issues are. Our experts will come to your facility or facilities to observe and benchmark your perioperative process, interview applicable stakeholders and provide a roadmap for success.

Because knowing what to do and doing it are two different things, our team will work side-by-side with your staff to implement the necessary changes quickly. Finally, our proprietary tools and processes help you to stay ahead of the curve, year after year.

If you are looking to improve your orthopedic surgical volume, margin or level of care, call us at 724.799.8210 or visit our webpage at [accelerohealth.com/expertise/perioperative/](http://accelerohealth.com/expertise/perioperative/).
